REC'D 20 MAR 2003

WIPO PCT

I, the undersigned, being an officer duly authorised in accordance with Section 74(1) and (4) of the Deregulation & Contracting Out Act 1994, to sign and issue certificates on behalf of the Comptroller-General, hereby certify that annexed hereto is a true copy of the documents as originally filed in connection with the patent application identified therein.

In accordance with the Patents (Companies Re-registration) Rules 1982, if a company named in this certificate and any accompanying documents has re-registered under the Companies Act 1980 with the same name as that with which it was registered immediately before re-registration save for the substitution as, or inclusion as, the last part of the name of the words "public limited company" or their equivalents in Welsh, references to the name of the company in this certificate and any accompanying documents shall be treated as references to the name with which it is so re-registered.

In accordance with the rules, the words "public limited company" may be replaced by p.l.c., plc, P.L.C. or PLC.

Re-registration under the Companies Act does not constitute a new legal entity but merely subjects the company to certain additional company law rules.

Signed *Am Brewster*

1. Your reference

2. Patent application number

(The Patent Office will fill in this part)

0204075.6

121 FEB 2002

3. Full name, address and postcode of the or of each applicant (underline all surnames)

MR NICHOLAS OXLEY
63 ALDBOURNE ROAD
LONDON W12 0LW

Patents ADP number (if you know it)

If the applicant is a corporate body, give the country/state of its incorporation

8729864001

4. Title of the invention

SELF - STABILIZING FOUR-LEGGED SUPPORT STRUCTURE

5. Name of your agent (if you have one)

"Address for service" in the United Kingdom to which all correspondence should be sent (including the postcode)

63 ALDBOURNE ROAD
LONDON W12 0LW

Patents ADP number (if you know it)

6. If you are declaring priority from one or more earlier patent applications, give the country and the date of filing of the or of each of these earlier applications and (if you know it) the or each application number

Country

Priority application number
(if you know it)

Date of filing
(day / month / year)

7. If this application is divided or otherwise derived from an earlier UK application, give the number and the filing date of the earlier application

Number of earlier application

Date of filing
(day / month / year)

8. Is a statement of inventorship and of right to grant of a patent required in support of this request? (Answer 'Yes' if:

NO

- a) any applicant named in part 3 is not an inventor, or
- b) there is an inventor who is not named as an applicant, or
- c) any named applicant is a corporate body.

See note (d))

Warning

After an application for a patent has been filed, the Comptroller of the Patent Office will consider whether publication or communication of the invention should be prohibited or restricted under Section 22 of the Patents Act 1977. You will be informed if it is necessary to prohibit or restrict your invention in this way. Furthermore, if you live in the United Kingdom, Section 23 of the Patents Act 1977 stops you from applying for a patent abroad without first getting written permission from the Patent Office unless an application has been filed at least 6 weeks beforehand in the United Kingdom for a patent for the same invention and either no direction prohibiting publication or communication has been given, or any such direction has been revoked.

Notes

- If you need help to fill in this form or you have any questions, please contact the Patent Office on 08459 500505.
- Write your answers in capital letters using black ink or you may type them.
- If there is not enough space for all the relevant details on any part of this form, please continue on a separate sheet of paper and write "see continuation sheet" in the relevant part(s). Any continuation sheet should be attached to this form.
- If you have answered 'Yes' Patents Form 7/77 will need to be filed.
- Once you have filled in the form you must remember to sign and date it.
- For details of the fee and ways to pay please contact the Patent Office.

SELF-STABILIZING FOUR-LEGGED SUPPORT STRUCTURE

The invention relates to any type of four-legged object. It is particularly applicable to furniture including chairs, tables, beds, benches, chests of drawers, shelving units and pedestals.

The invention addresses the problems that arise when one leg of a four-legged object does not touch the ground. This often results in objects which are inherently unstable and prone to random, unwanted and often disturbing rocking motion. This can be a problem on flat and rough surfaces. Three-legged objects, like tripods, do not have this problem; however, a three-legged object is not ideal for supporting larger loads of varied geometry.

An object of this invention is to produce a four-legged support structure, which can rest in a perfectly stable state on most surfaces.

Accordingly, this invention consists of two sets of legs coupled together through a bearing assembly so that these sets of legs can rotate with respect to one another. The design requires that all other furnishings be attached to only one of the two sets of legs.

Preferably, the legs and bearing assembly are made of materials which will not bend substantially or shear under normal loading conditions, providing a state of rotation between the first and second set of legs.

A preferred embodiment of the invention will now be described with reference to the accompanying drawing in which the basic principles of this invention are applied to the design of a chair.

FIGURE 1 shows a side view of the whole chair;

FIGURE 2 shows a back view of the whole chair;

FIGURE 3 shows a top view of the whole chair;

FIGURE 4 is a section showing the bearing assembly about which the two sets of legs can rotate.

As Figures 1,2, and 3 show, the exterior of the chair comprises a first set of legs 1, a second set of legs 2, and a seat 3. The seat 3 is fixed to only one of the two sets of legs. For this design, the height of the frame was determined to be consistent with ergonomic recommendations for fixed frame seat heights. The exact proportions of the frame can be modified to accommodate different functional requirements.

Figure 4 shows a cross-section of a standard bearing assembly, which allows the first set of legs 1 to rotate with respect to the second set of legs 2.
